September 15, 2026

## 1 First HTML Page

Creation of `hello.html` with a heading, a paragraph and a button calling a JavaScript function `showMessage()` that displays an alert.

## 2 Student Portal

`portal.html` contains a title, a name field, a password field and a **Login** button. Clicking it displays You are logged in!.

### Student Portal

Name:  password:

## 3 Decoy Game

`game.html` contains a *Catch Me* button positioned with `position: absolute`. The function `CatchMe()` increases the score and moves the button to a random position at each click, using `Math.random()` for the new `left` and `top` values.

## Catch Me!

Score: 0

Catch Me

```
1  <!DOCTYPE html>
2  <html>
3  <head>
4  <title>Catch Me!</title>
5  <style>
6  #catchButton {
7  position: absolute;
8  top: 205px;
9  left: 440px;
10 }
11 </style>
12 </head>
13 <body>
14 <h1>Catch Me!</h1>
15 <p>Score: <span id="score">0</span></p>
16
17
18 <button id="catchButton" onclick="CatchMe()">Catch Me</button>
19 <script>
20     let score=0;
21     function CatchMe() {
22
23
24         let scoreDisplay= document.getElementById("score");
25         let button= document.getElementById("catchButton");
26         let x;
27         let y;
28         x=Math.random()*500 ;
29         y=Math.random()*500 ;
30
31         button.style.left=x +"px" ;
32         button.style.top=y +"px" ;
33
34
35         score++;
36         scoreDisplay.textContent=score ;
37
38     }
39 </script>
40 </body>
41 </html>
```

## 4 Iframe

The portal is embedded inside the game with `<iframe src="portal.html">`. The two pages are then aligned so that the **Login** button is exactly above the *Catch Me* button.

### Catch Me!

Catch Me

**Student Portal**

Name:  password:

## 5 Hiding the Student Portal

The `opacity` property of the `iframe` is reduced step by step:

```
opacity: 1; opacity: 0.5; opacity: 0.1; opacity: 0;
```

The portal becomes invisible but remains clickable, because `opacity` only changes the appearance, not the position or the event handling.
